COOLING SYSTEM MAINTENANCE

Proper maintenance of the cooling system can prevent expensive repairs. Simple basic maintenance must be performed, and it is critical that the proper coolant is used in each system. There is no universal coolant that will work in all models.

There are many different types of coolant, and only the OE specified coolant should be used in each vehicle. Coolant types should never be mixed because this can cause a rapid deterioration of the cooling system and it's components. The additives used for different aluminum radiators, heater cores and engine components have caused the increase in types of coolant. Everyone should stock three kinds of coolant and these are:

IAT chemistry (or Inorganic Additive Technology) - Approximately 56% (or 125 million) of the passenger vehicles on the road use the traditional green antifreeze/coolant that we have known for years. The typical life of this coolant is 24 to 36 months. Although still a big seller today, the need for this chemistry will decline over time since it is no longer used in new vehicle production. This chemistry is proven and has been used for decades. It provides quick protection of metals against corrosion with silicate but these additives deteriorate within 24-36 months leaving the cooling system vulnerable for corrosion. Its high solid contents can also lead to deposits. And, like all antifreeze/coolant chemistries, it is not additive compatible with the other types. This coolant is typically green in color.

OAT chemistry (or Organic Acid Technology) - Another 34% (or 76 million) of the passenger vehicles on the road use a long life coolant. It's most commonly found in GM vehicles produced since 1996 under the name DEX-COOL® and also in Asian made vehicles beginning that same year. It's also the most common chemistry found in the "universal – all makes all models" chemistries on the market today. As a note: One quick way to tell if the product is OAT is to look at the ingredients on the label. If you see 2-Ethylhexanoate Acid, it's most likely an OAT. The demand for this chemistry will continue to increase as more of these vehicles roll off the

assembly line and into the market. Its formula is silicate and phosphate free and it relies on “acid” to provide corrosion protection. When used in the proper vehicles, this chemistry provides long lasting corrosion protection by creating a protective barrier on metals with its acid additives. It can provide protection for up to 5 years or 100,000 to 150,000 miles and works well in its intended applications of GM and Asian vehicles but does not meet the specifications of older vehicles requiring IAT green or the newer vehicles that specify HOAT. This coolant is typically orange in color.

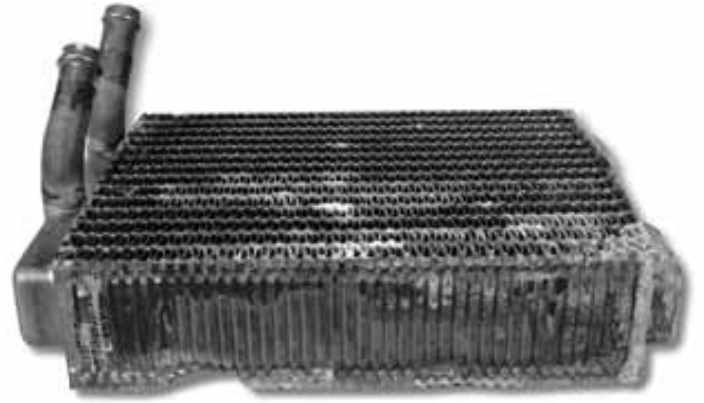

HOAT chemistry (or Hybrid Organic Acid Technology). - This leaves 10% (or 23 million) of the passenger vehicles on the road using this style of coolant. It can be found in newer Ford and DaimlerChrysler vehicles as well as many European makes including Mercedes, BMW, Volvo and more. Like OAT, the demand for this chemistry will rise as more of these vehicles hit production. This chemistry is phosphate free. HOAT takes the quick protecting silicates from IAT and couples them with the long lasting organic acid protection of OAT to create this hybrid formula. Like OAT, it provides protection for up to 5 years or 100,000 to 150,000 miles. This coolant is typically yellow in color.

Always refer to the owner’s manual for the proper coolant type and fill quantity.

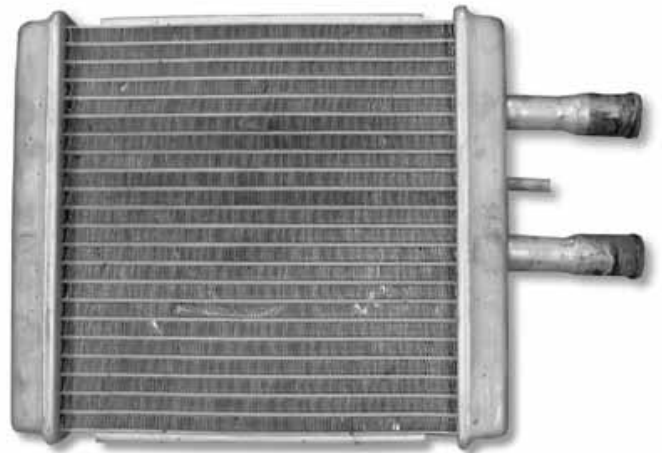

Determining the major root causes of Heater Core Failures

Heater Core Diagnosis

- **What Caused The Core To Fail???**
 - ✓ **Mechanical Damage During Installation**
 - ✓ **Contaminated Coolant**
 - ✓ **Electrical Ground Issues**
 - ✓ **Missing Coolant Restrictors**

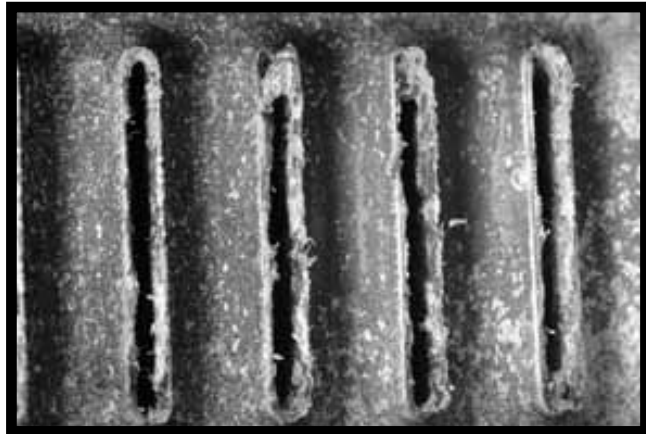

- **Examine The Core For The Cause Of Failure Or Test The Coolant And System For Service Issues**

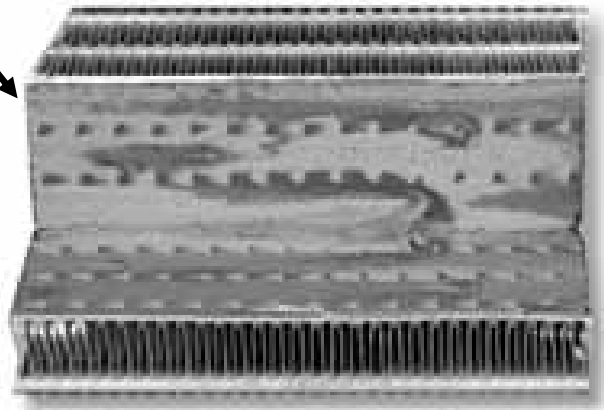

Root Cause of Corrosion

- **Coolant Deterioration**
 - ✓ **Old – Weak Coolant**
 - ✓ **Air Contamination**
 - ✓ **pH Level Low**
 - ✓ **High Acid Content**
- **Testing Coolant With Test Strips Recommended ph levels:**
 - ✓ **Regular Coolant (8.5 - 10.5)**
 - ✓ **DEX-COOL (8.3)**

Top Image – Corrosion\Acid Dissolves The Aluminum Solder Joints

Inside Of
Cut Open
Tube

Bottom Image – Weak Contaminated Coolant Dissolves Aluminum Oxide Coating Causing Metal Failure

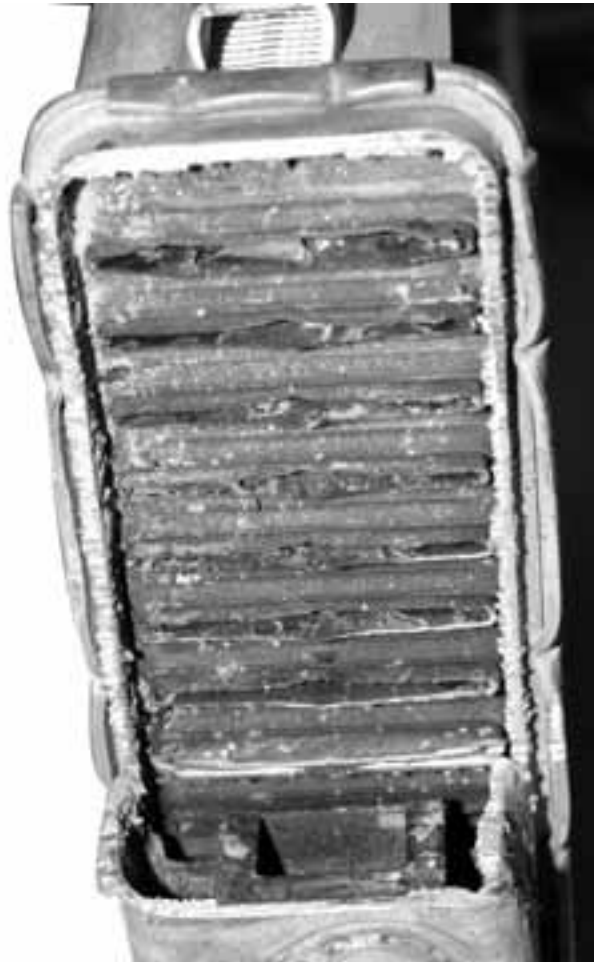

Repair Process of Corrosion

- **Drain All Coolant From System**
- **Replace Failed Parts and check following parts**
 - ✓ **Thermostat & Housing**
 - ✓ **Radiator Cap**
- **Flush System With Garden Hose Adapter**
 - ✓ **Check for state restrictions – Not sold in California**
- **Place System Under A Vacuum**
- **Fill With 50/50 Mix Of Coolant**

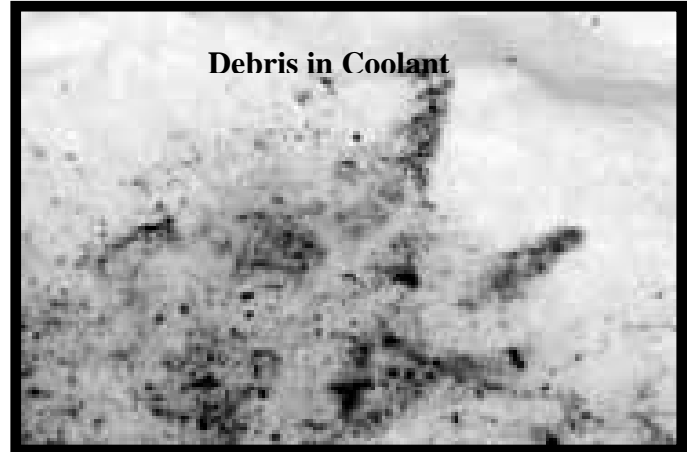

Root Cause of Erosion

- **Foreign Material Suspended In Coolant**
 - ✓ **Sand In Engine Block**
 - ✓ **Scale & Rust**
- **Excessive Volume Of Coolant Flowing Through The Heater Core**
 - ✓ **Missing Restrictors In Heater Hose Or Incorrect Hose Fittings Installed**

Erosion Repair Process

- **Drain And Inspect Coolant For Debris**
- **R & R Radiator For Cleaning**
- **Drain & Flush Out Engine Block**
- **Remove Overflow Tank And Clean**
- **Replace Failed Parts And Thermostat**
- **Place System Under Vacuum And Fill With 50/50 Coolant Mix**

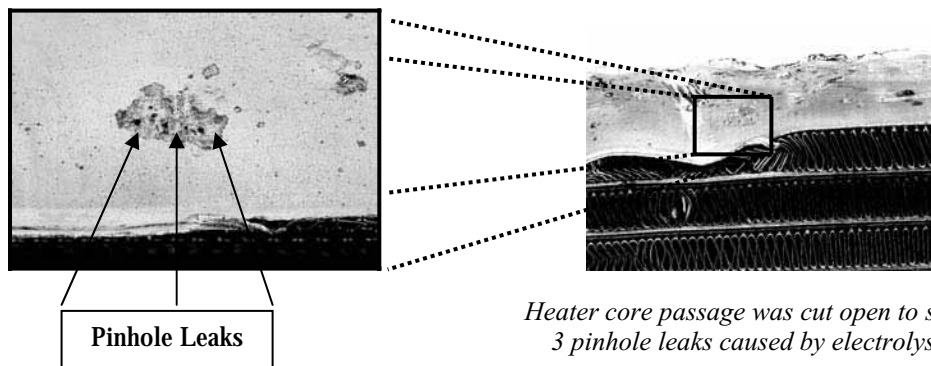

Electrolysis: A Major Cause of Heater Core Failure

A major cause of heater core failure is electrolysis, a process of chemical changes in the cooling system, by the passage of an electrical current through the engine coolant. Chemical changes can ionize the system and can cause metal to be removed from the heater core and be deposited to other metals in the system. The result is a pinhole leak(s) at/or within the heater core.

Electrolysis is more noticeable in late model vehicles due to higher engine operating temperatures and different coolant requirements. When the cooling system is neglected or not properly maintained, the coolant can help promote passage of an electrical current.

Current can also exist in the cooling system because the engine serves as a pathway to ground between the battery negative cable and the negative terminals of electrical components, including the starter and engine cooling fan. Dirty, loose or missing ground connections can increase voltage flow, through the cooling system, in search of an alternate ground.

Testing for Electrolysis:

- Test with the engine running and at operating temperature. Make sure that all engine ground straps are in place.
- Using a digital voltmeter: Place the negative (-) lead to the battery negative post and the positive (+) lead into the coolant.
- A voltage reading above 0.300V can cause pinholes in the heater core in a short amount of time.

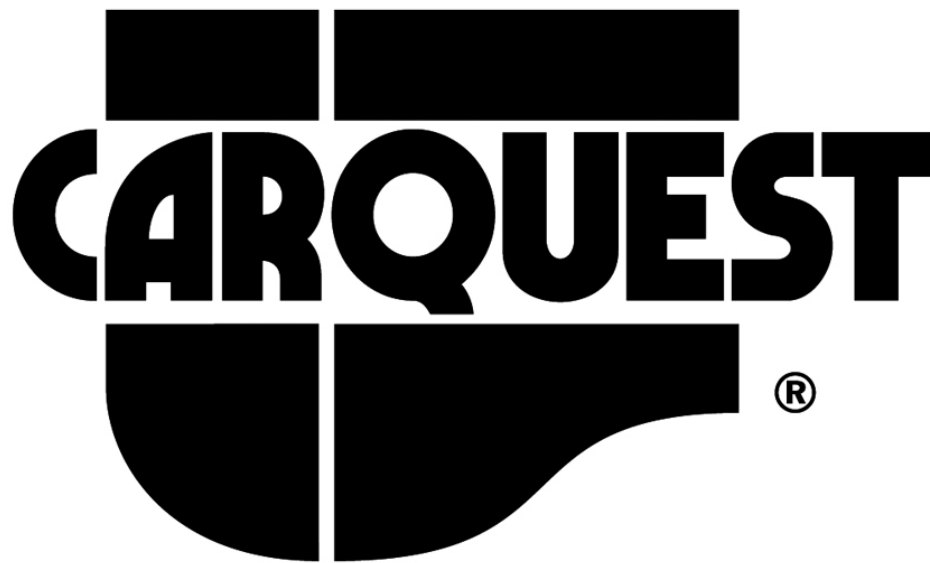

Before the Repair:

- Ask the customer if this is the first heater core failure, or if it is a repeat failure.
- Ask when the cooling system was last serviced and check the condition of the coolant.
- If the system has had multiple heater core failures, (usually with small blackish pinholes) the system should be checked for electrolysis.
- Thoroughly service the coolant system with an approved flush and neutralizer. This should eliminate or reduce the electrolysis action.
- Check all ground cables, straps, wires and terminal connections.

2006 Heater Core Application Section

Using The Application Guide

1
Turn catalog to make of vehicle located at top of page.

2
Select vehicle model heading.

3
Select year under model. Years are listed from newest, descending to older.

4
Secondary information gives final identification for correct part number.

CHEVROLET

5
Multiple columns also offer secondary information and component breakdowns.

6
Select part under all applied information.

7
-- = Not Serviced

EXAMPLE:
A customer needs a Heater Core for a 1969 Chevrolet Camaro, 8 Cyl, 5.7, w A/C.

STEPS: Locate
(1) Chevrolet Section
(2) Camaro
(3) 1969 Year
(4) 8 Cyl, 5.7 Eng.
(5) w A/C
(6) Part Number 279118

Como usar La Guia de Aplicaion

1. Ubique la marca del vehiculo en la parte superior de la página.
2. Seleccione el nombre del modelo vehiculo.
3. Seleccione el años del modelo. Los años están en orden de lista empezando por el más reciente hasta el más antiguo
4. La información secundaria le dará la identificación final del número de la pieza.
5. Las otras columnas también ofrecen información secundaria junto con los componentes de cada pieza.
6. Seleccione la pieza después de haber conducido los pasos mencionados.
7. -- = fuera de servicio

Utiliser l'information pour Pièce detachée

1. Cherchez la marque de vehicule en caractères gras en haut de la page.
2. Trouvez la marque de vehicule.
3. Cherchez en suivant les colonnes Modele at Année en reprenez exactement votre vehicule de la liste la plus ancienne a la plus recente.
4. L'information secondaire donne l'identite finale est pour le numero exact de votre piece.
5. Les multiples colonnes vous donnerent aussi l'informate secondaire et la défâcle de votre piece.
6. Cherchez la piece pour l'information qui est applicable.
7. -- = pas servicable

- The Illustrated Parts Guide is intended to give additional information for a part number you have selected from the Application Guide.
- Quality photos and detailed information is listed for each part number with General Applications.
- Numerical Index gives exact page number or location of part number.
- Original Equipment part numbers are grouped by manufacture in numerical sequence and cross referenced to part numbers.

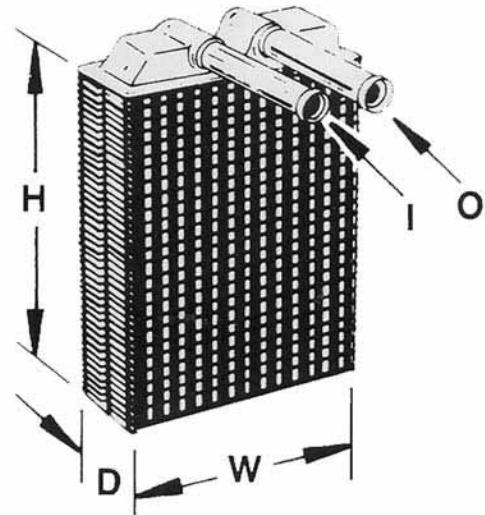

- El propósito de la Guía Ilustrada de Piezas es de proporcionar información adicional sobre un numero de pieza que se ha seleccionado de la Guía de Aplicaciones.
- Fotografías de buena calidad e información detallada acompañan cada número de pieza con Aplicaciones Generales.
- El Índice Numérico proporciona el número de página o la localización exacta de un número de pieza.
- Números de pieza para Equipos Originales se agrupan según la fabricación, por orden numérico, y llevan contrarreferencia al número de pieza.

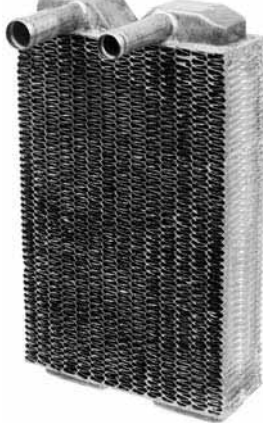

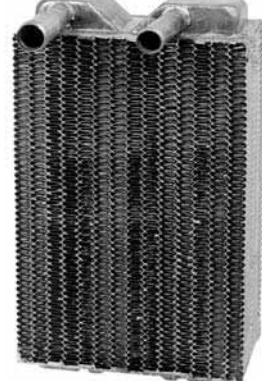

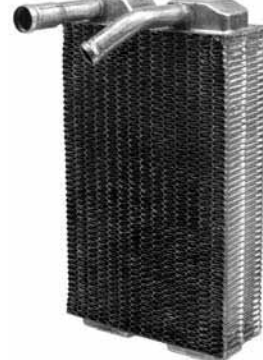

- Le Guide illustré des pièces vise à donner des renseignements supplémentaires sur une pièce choisie dans le Guide d'application.
- Chaque pièce est accompagnée de photos de qualité, de renseignements pertinents ainsi que de ses applications générales.
- L'index numérique donne le numéro de la page du guide ou l'emplacement de la pièce.
- Les pièces d'origine sont groupées par fabricants en ordre numérique et renvoient aux numéros de pièces.

CARQUEST
E.SERVICES

my CARQUEST
homepage

TECHNOLOGY

INFORMATION • NEWS • PRICING • ORDER • MSDS

My CARQUEST homepage is a constantly updated, industry specific web application that is imbedded into all the CARQUEST eServices Products. It offers the Service Dealer a one-stop source for information about CARQUEST, the industry and the world. This product provides your store with CARQUEST MSDS Sheets, Digital Images and CARQUEST Promotions as well as information about CARQUEST Technical Institute (CTI) and in the near future you will be able to retrieve accounts receivable information through "Instant Access."

CARQUEST eServices provides a suite of management, information, and part sourcing solutions designed specifically by and for the Service Dealer. These solutions come in a menu of choices from stand-alone ordering and information tools, to integrated shop management and point of sale applications, helping the Service Dealer Customers make buying and repair decisions quick, easy, and accurate.
